Supplier Audit / Technical Evaluation Report - VOP/DA7/GB1/ /B13 - LSM

Audit

Tech. Evaluation

Supplier : Metal Improvement Company – MIC - España (SK3000's supplier) – Seville

EMBRAER's Representative :

Luciana Sueza Mariano – Quality Supplier

Cleber Vasquez de Mesquita – CTA Designated Engineering Representative - Product Development Materials Engineering

Metal Improvement Company's Representative :

Manuel Artero Román - Quality Responsible

Alejandro Muñoz Viretti – Facility Director

Jean-Yves Thieuleux – Technical and Commercial Director

SK3000's Representative :

Jesus Garcia – Quality Supplier

Period : February 19th ,2008

Scope / Contractual Requirement :

EQRS – EMBRAER Quality Requirements for Suppliers - Revision /

Introduction :

Since 1945, Metal Improvement Company (MIC) has been a pioneer in the shot peening industry by continually advancing the state-of-the-art in customized shot peening equipment and shot peening techniques. Today, MIC operates 24 shot peening facilities in North America and 12 in Europe, and also has the capability to provide on-site shot peening services on a worldwide basis for aircraft, power generation and construction & refurbishment projects.

MIC has extended the science of imparting engineered residual stresses to metal surfaces by the recent introduction of laser peening process. MIC operates one laser peening facility in North America and one in Europe to provide this unique technology to customers on both continents. Applications have emerged for turbine engines, aircraft structures, nuclear waste disposal, power generation and medical implants.

The Seville facility is capable to process a variety of large to mid-size aluminum aircraft components including spars, ribs and fixtures. In addition, the facility has been forming services for shaping of aircraft wing structural components and dimensional restoration of components that have become distorted due to machining or other metal working processes.

For EMBRAER parts, MIC Seville will perform Special Processes to SK3000's sub tiers.

Quality Certifications :

UNE – EN 9100 : 2003 – issued February 2008 / until February 2011

Basic Standards :

NE40-072 - SHOT PEENING

Requirements verified :

The Engineering Standard specification above and Quality Requirements according EQRS.

THIS DOCUMENT CAN NOT BE USED , PUBLISHED NOR COMMUNICATED TO THIRD PARTIES OR REPRODUCED WITHOUT AUTHORIZATION OF THE EMBRAER.

Supplier Audit / Technical Evaluation Report - VOP/DA7/GB1/ /B13 - LSM

Technical Evaluation :

1 – EMBRAER presents the EQRS – EMBRAER Quality Requirements for Suppliers – Revision / , available at www.embraer.com/ftp/pub in order to guarantee that supplier understand and complies with EMBRAER Quality Requirements.

2 – EMBRAER comments the following points:

- General Requirements – EQRS 4.1 / OPR (4.100.03);
- Control of Records – EQRS 4.2.4 (OPR 4.240.01),reinforcing that this is an important point in order to guarantee the product traceability.
- First Article Inspection – EQRS 8.2.4.2 .
- Special Processes

3 - EMBRAER proceeds with the Special Processes Qualification.

Metal Improvement Company – MIC Seville has issued one Request for Alternative (RFA) as SK3000's sub tier :

- SK-MICS-001 - NE 40-072 / Q - SHOT PEENING

The RFA was analyzed and **APPROVED** by EMBRAER Engineering.

3.1 – Resources available at MIC Seville :

The plant is 12,920-square-foot and provides shot peening and peen forming services .

The new MIC Seville facility has a custom spar processing machine designed and constructed by MIC's UK Engineering Division.

MIC Seville also performs Shot Peening using Ceramic Shot.

3.2 - Process Control Documents

MIC Seville performs Shot Peening Process under totally controlled and traceable conditions. To all EMBRAER Parts was performed FAI – First Article Inspection , see attached an example.
